Table of Contents

Preface ..... **ix**

Chapter 1 Overview of Compilers and Language Translation **1**

1.1 The Role of Programming Languages 1
1.2 Translators and Compilers 1
1.3 Tombstone Diagrams 4
1.4 Bootstrapping a Compiler 7
1.5 Interpreters 10
1.6 The Compiler Project 11
1.7 Essential Terms and Concepts 13
1.8 Exercises 14

Chapter 2 Structure of a Compiler **15**

2.1 Scanner 16
2.2 Parser 16
2.3 Constraint Analyzer 17
2.4 Code Generator 17
2.5 Optimizer 18
2.6 Final Code Generator 19
2.7 Tables and Maps 19
2.8 Error Handler 20
2.9 Passes 21
2.10 Compiler Design Goals 21
2.11 Essential Terms and Concepts 22
2.12 Exercises 23

Chapter 3 Context-Free Grammars **25**

3.1 Specifying a Programming Language 25
3.2 Context-Free Grammars 26
3.3 Alternate Rule Notations 33
3.4 Grammar Transformations 36
3.5 Derivations and Parse Trees 37
3.6 Abstract Syntax Trees 41
3.7 A Context-Free Grammar for Context-Free Grammars 42
3.8 Essential Terms and Concepts 43
3.9 Exercises 44

Chapter 4 The Programming Language CPRL 47
4.1 General Lexical Considerations..... 47
4.2 Declarations, Statements, and Expressions 48
4.3 Types 49
4.4 Statements..... 52
4.5 Programs 54
4.6 Subprograms 54
4.7 Essential Terms and Concepts..... 56
4.8 Exercises 57
Chapter 5 Lexical Analysis (a.k.a. Scanning) 59
5.1 Class `Position` 59
5.2 Class `Source` 59
5.3 Class `Symbol` 61
5.4 Class `Token` 62
5.5 Class `ErrorHandler`..... 63
5.6 Class `TokenBuffer` 64
5.7 Class `Scanner` 64
5.8 Handling Lexical Errors 71
5.9 Testing Class `Scanner`..... 73
5.10 Essential Terms and Concepts..... 75
5.11 Exercises 75
Chapter 6 Syntax Analysis (a.k.a. Parsing)..... 77
6.1 Example: Implementing Method `parseLoopStmt()` 78
6.2 Recursive Descent Parsing 81
6.3 First and Follow Sets..... 87
6.4 LL(k) Grammars and Recursive Descent Parsing..... 94
6.5 Variables versus Variable Expressions 96
6.6 Handling Grammar Limitations..... 96
6.7 Scope and Visibility 99
6.8 Class `IdTable` 102
6.9 Parsing Variables and Variable Expressions 108
6.10 Class `Parser` 109
6.11 Essential Terms and Concepts..... 110
6.12 Exercises 111

Chapter 7 Error Handling/Recovery 113
7.1 Types of Compilation Errors 113
7.2 Handling Errors 115
7.3 Error Recovery 116
7.4 Additional Error Recovery Strategies 122
7.5 Essential Terms and Concepts 123
7.6 Exercises 123
Chapter 8 Abstract Syntax Trees 125
8.1 Overview of Abstract Syntax Trees 125
8.2 Structure of Abstract Syntax Trees 127
8.3 Extending Scopes with References to Declarations 129
8.4 Types and Declarations 135
8.5 Structural References versus Nonstructural References 137
8.6 Determining Types of Variables and Expressions 139
8.7 Maintaining Context During Parsing 142
8.8 Essential Terms and Concepts 144
8.9 Exercises 144
Chapter 9 Constraint Analysis 145
9.1 Overview of Constraint Analysis 145
9.2 Constraint Rules for CPRL/0 149
9.3 Examples of Constraint Analysis 151
9.4 Essential Terms and Concepts 154
9.5 Exercises 154
Chapter 10 The CPRL Virtual Machine 157
10.1 Overview of the CVM 157
10.2 CVM Uses Relative Addressing 159
10.3 Loading a Program into Memory 159
10.4 Using the Stack to Hold Temporary Values 162
10.5 Essential Terms and Concepts 168
10.6 Exercises 169
Chapter 11 Code Generation 171
11.1 Overview of Code Generation 171
11.2 Labels and Branching 172
11.3 Load and Store Instructions 176
11.4 Computing Relative Addresses 177
11.5 Expressions 179

11.6 Statements 182
11.7 Disassembler 186
11.8 Essential Terms and Concepts 188
11.9 Exercises 189
Chapter 12 Code Optimization 191
12.1 Overview of Code Optimization 191
12.2 Common Optimizations 194
12.3 Optimization in CPRL 199
12.4 Essential Terms and Concepts 201
12.5 Exercises 201
Chapter 13 Subprograms 203
13.1 Review of Subprograms, Scope, and Parameters 203
13.2 Run-time Organization for Subprograms 207
13.3 Activation Record 209
13.4 Parameters 216
13.5 Subprogram Calls and Returns 218
13.6 Calling Conventions for CPRL on CVM 219
13.7 Computing Relative Addresses 220
13.8 Example of Program Execution 224
13.9 Essential Terms and Concepts 236
13.10 Exercises 236
Chapter 14 Arrays 239
14.1 Using CPRL Arrays 239
14.2 Implementing CPRL Arrays 241
14.3 Essential Terms and Concepts 244
14.4 Exercises 245
Chapter 15 Strings 247
15.1 Using CPRL Strings 247
15.2 Implementing CPRL Strings 249
15.3 Essential Terms and Concepts 254
15.4 Exercises 255
Chapter 16 Records 257
16.1 Using CPRL Records 257
16.2 Implementing CPRL Records 260
16.3 Essential Terms and Concepts 265
16.4 Exercises 265

Appendix A The Compiler Project 267
Appendix B Additional Project Exercises 277
Appendix C Definition of the Programming Language CPRL..... 281
C.1 Lexical Considerations..... 281
C.2 Types 283
C.3 Constants and Variables..... 285
C.4 Operators and Expressions 286
C.5 Statements 287
C.6 Programs..... 289
C.7 Subprograms..... 290
Appendix D The CPRL Grammar 293
Appendix E Definition of the CPRL Virtual Machine 297
E.1 Specification. 297
E.2 Implementation 298
E.3 CVM Instruction Set Architecture 301
Appendix F Searching for Reserved Words 311
F.1 Benchmarking the Search Algorithms 312
F.2 Sequential Search 1..... 313
F.3 Sequential Search 2..... 314
F.4 Sequential Search 3..... 315
F.5 Binary Search 316
F.6 Search by Length..... 317
F.7 Search by First Character 319
F.8 Gperf Hash Search 320
F.9 Search Using Switch Expression 323
F.10 Search Using `HashMap`..... 324
Annotated Compiler References and Websites..... 325
Index..... 329
